Dear

STAT

I have to sell a bill of goods : the most difficult to sell of all, namely to change man's mind. And that means about " all " men's minds communistic and capitalistic, etc.

From the speech of President Eisenhower in Waco, Tex. which you have probably read in the papers, he now asks the assistance of all the universities of the Western Ideas.

I know only " one " university in the U.S.A. and one which is only " one " man and who would perhaps loose his job if he would maintain that physics and its organisatorial mathematics are the most exact communication with an Energy for which all men have a name, but which is not exactly scientific.

The President did not mention that at the present time there is not " one " university which has a theory which conforms with his wishes otherwise there would simply not exist a Marx's theory of value.

I just received a letter from Professor Reiser and incidentally he wrote me that now and then he tries to teach some of the ideas we build up during the last 7 years. And in which I had to overcome a lot of resistance on his part

Universities have however a curriculum to which they have to adhere. Without an incentive from outside all the universities could only repeat the story of the Voice of America, that we are such good boys and the commies are bad ones. Just now they try to turn out even to be better boys than we are and Mr. Nasser goes to Peiping and of all things there is a rumor that the Queen of England may visit her good friend in Moscou.

Would that be possible IF our universities could show that the foundation of communism was wrong from a scientific point of view. It would like something of " stop the music."

Mr. Dunnewolt has held already a 40 lectures in Holland, all for the well educated world. Attached here is a photograph of him. Under his audience was Dr. Drees, the present Prime-Minister of the Dutch Government. I hope that Captain Horn would give me a chance to hold a lecture about the Reason of Gravity before his best scientists (and without publicity) and in which they could correct me that the \$ 25 million satellite runs about 6000 miles per hour short of what it had to do in order to stay up. They could try to tear me to pieces, though my meat is now somewhat tough.

On the other hand the present situation is more and more, one, in which the commies have all the trumps in their own hands and this is ridiculous.

NB. As a matter of fact the whole correspondence between Reiser and Dunnewolt and myself is at your disposition.

Respectfully yours,

B.G.H. Vanderjagt.
